SUMMARY

Backend Engineer with expertise in building AWS-native, event-driven systems at scale. Shipped a **zero-downtime** inter-cloud migration onboarding a 50-person team in 3 months, and a production hiring pipeline that **reduced 900 man-hours of manual effort to 50**; built during a 24-hour hackathon.

TECHNICAL SKILLS

Development Languages: JavaScript, TypeScript, Java, Python, SQL
Frameworks & Libraries: Node.js, Express.js, FastAPI, Langchain, React, Jest, Cypress, Superagent
Databases & Caches: DynamoDB, Aurora, MongoDB, PostgreSQL, Redis, Weaviate
Cloud & DevOps: AWS (S3, SQS, Lambda, Firehose, Glue, Athena, OpenSearch), Terraform, Docker
Developer Tools: Datadog, GitHub Actions, Bash

EXPERIENCE

Software Engineer | ION Trading July 2024 – Present

- Built a scalable, serverless reporting pipeline processing **1M+ daily API and UI search events**, leveraging **Kinesis Firehose, S3, Glue, and Athena** to produce on-demand customer reports delivered via secure pre-signed URLs.
- **Led a zero-downtime migration from Azure to AWS**: Rewrote microservices and migrated GBs of relational data to Aurora RDS using a dual-write sync strategy, onboarding a 50-person client services team onto the new platform within 3 months.
- Architected an event-driven, serverless attachments service allowing users to associate evidence files with workflows to improve auditability; **built with AWS Lambda, SQS, S3, DynamoDB** and **React** using **Terraform** processing **3k+** weekly requests.
- Built an automated hiring pipeline in Node.js using the Lever REST API during an **internal 24-hour hackathon**, now running in production, scheduling interviews across multiple rounds for 5,000+ applicants from a single Excel input; **reduced a 5-person team's combined effort from 900 to 50 man-hours.**
- Architected **RBAC** flows by extending the existing auth infrastructure, enabling fine-grained, resource-level permission management for admins and replacing broad access patterns with targeted, auditable controls.

FEATURED PROJECT

Paralegal | *Node.js, AWS, Localstack, Docker, Langchain.js, Weaviate, OpenAI, Bash* | GitHub | PPT

- Engineered a production-grade RAG system for legal professionals to query large document sets using natural language; combining **Weaviate** vector search with OpenAI models for accurate, context-aware document Q&A.
- Architected an event-driven, serverless ingestion pipeline; PDF uploads via pre-signed **S3** URLs trigger **Lambda** through **SQS** for automated parsing, chunking, and vector embedding at scale.
- Engineered a **self-healing feedback pipeline** with 10 complaint categories and a **chunk-level scoring engine** that tracks per-chunk usage and complaint rates, automatically routing issues to LLM-based correction, response regeneration, or human review once penalty thresholds are crossed.
- Delivered consistent multi-environment deployments across **AWS** and local dev using **Terraform** and **Localstack**.

EDUCATION

- Vellore Institute of Technology **B.Tech in Computer Science** | GPA: 8.4/10 September 2020 – July 2024

AWARDS AND CERTIFICATIONS

AWS Certified Cloud Practitioner (Present – May 2027)
AWS Certified Solutions Architect Associate (Present – May 2027)
Flipkart GRiD 5.0: Top 1% among *400,000* Participants
MLH: 5x Hackathon Winner along with Sponsor Tracks of Google Cloud, goDaddy, Twilio, Agora
TwilioQuest: Won Top5 in a blitz organized by Twilio
Treasure Hacks 3.5: Won in *Blockchain* Track with Sponsor Track of *Cockroach Labs*
